

# SHOSHONE-EUREKA RANGELAND PROGRAM SUMMARY

U.S. DEPARTMENT OF THE INTERIOR  
Bureau of Land Management  
Battle Mountain District, Battle Mountain, Nevada

DECEMBER 1988

# United States Department of the Interior

BUREAU OF LAND MANAGEMENT  
BATTLE MOUNTAIN DISTRICT  
OFFICE

2nd & Scott Street  
P.O. Box 1420  
Battle Mountain, NV 89820

IN REPLY REFER TO  
4100  
(NV-063.9)

DEC 7 1988

Dear Reader:

It is my pleasure to make available to you the Initial Rangeland Program Summary (RPS) for the Battle Mountain District's Shoshone-Eureka Resource Area.

The Shoshone-Eureka Resource Management Plan and Environmental Statement has been completed. It is now time to turn our efforts toward accomplishing those goals and objectives we have set for ourselves.

The purpose of this document is to provide a tracking mechanism from the Resource Management Plan Decisions, through the implementation of grazing management actions. Subsequent RPS updates will be issued to keep you informed of our management progress.

Public participation will continue to play a vital role in the development and implementation of management actions. Consequently, we encourage your continued involvement and feel confident that together we can put our planning efforts to work to best meet our public and resource needs.

Sincerely,

Terry L. Plummer  
District Manager

## I. INTRODUCTION

The Proposed Resource Management Plan and Final Environmental Impact Statement (RMP-FEIS) for the Shoshone-Eureka Resource Area was completed on February 27, 1984. It analyzed a preferred resource management program, along with several alternatives, all of which were multiple use oriented.

In March 1986, a Record of Decision was issued which outlined the decisions to implement the Resource Management Plan (RMP). In November 1987, a record of decision was issued amending the RMP. The amendment updated livestock grazing management in relation to objectives for livestock forage production, vegetation ecological condition and trends, terrestrial big game habitat condition and trends, and aquatic/riparian habitat conditions. Through implementation of the RMP, the Bureau is seeking to obtain a balance between economic uses of the public lands and environmental protection.

This Rangeland Program Summary (RPS) is used to identify and inform the public of grazing allotment management objectives in three major categories which are: livestock, wildlife and wild horses. Additionally, the RPS identifies the specific kinds of monitoring studies used to measure progress toward the RMP objectives. Proposed rangeland improvements are identified by allotment indicating those projects necessary to accomplish the objectives of the land use plan. These projects may be subject to some change dependent upon activity plan implementation.

The RPS is an on-going process that entails four steps:

1. The initial RPS summarizes the Bureau of Land Management's objectives for the rangeland management program, priorities for implementation, and consultation process.
2. The consultation period, during which the management proposals will be reviewed by affected parties.
3. The issuance of individual grazing decisions or agreements.
4. The RPS updates will summarize the decisions issued and agreements reached, decisions remaining to be issued and other progress to date.

## II. OBJECTIVES OF THE PROGRAM

### A. Vegetation

1. Establish a grazing management program designed to provide key forage plants with adequate rest from grazing during critical growth periods.

2. Achieve, through management of livestock and wild horses, utilization levels consistent with those recommended by the Nevada Rangeland Monitoring Handbook (NRMH) to allow more plants to complete growth cycles and to increase storage of reserves for future growth.
3. In the long term, improve ecological condition of 585,191 acres to good condition and 25,990 acres to excellent condition.
4. In the long term, stop downward trends in ecological condition on 464,873 acres and manage for upward trends on 634,868 acres.

B. Livestock Management

Manage livestock use at 239,717 animal unit months (AUMs) (5-year average use) in the short term and determine if such use can be maintained. In the long term, manage livestock use at 262,500 AUMs, in conformance with other objectives of the RMP.

C. Wildlife Habitat Management

1. Maintain existing wildlife habitat including big game habitat, sage grouse strutting and nesting areas.
2. Improve and maintain habitat for state listed sensitive species and Federally listed threatened or endangered species.
3. Provide habitat to allow big game populations to achieve reasonable numbers in the long-term, in conformance with other objectives of the RMP.
4. In the short-term, improve and maintain in good or better condition, 64 miles of aquatic habitat and 768 acres of riparian habitat associated with the streams and an additional 1,067 acres of other meadows, springs, and aspen groves.
5. In the long-term, improve and maintain in good or better condition, a total of 84.8 miles of aquatic habitat and 1,018 acres of riparian habitat associated with the streams and an additional 1,414 acres of other meadows, springs, and aspen groves.
6. In the long-term, improve and maintain 133,075 acres of big game habitat in good condition and 6,104 acres in excellent condition.
7. In the long-term, stop downward trends on 65,702 acres of big game habitat and manage for upward trends on 144,186 acres.

#### D. Wild Horse Use

1. Manage viable herds of sound, healthy wild horses in a wild and free-roaming state.
2. Initially manage wild horse populations at existing numbers based on 1982 aerial counts and determine if this level of use can be maintained in conformance with other objectives of the RMP.
3. Manage wild horses within the areas which constituted their habitat at the time the Wild and Free-Roaming Horse and Burro Act became law in 1971.

### III. MANAGEMENT IMPLEMENTATION

The rangeland management program will be implemented through agreements or decisions. In addition to adjustments based on monitoring, activity plans, such as Allotment Management Plans, Wildlife Habitat Management Plans, and Wild Horse Herd Management Area Plans, will be prepared to implement management practices and projects to achieve the RMP objectives. These will be arrived at through the Consultation/Coordination Process and the evaluation of monitoring data.

The consultation/coordination process may include participation by a formal Coordinated Resource Management (CRM) committee. The process may also be accomplished in a more informal manner, initiated by either the BLM or other interests. Regardless of the approach, all affected interests will be afforded the opportunity to actively participate in the process.

### IV. PRIORITIES FOR IMPLEMENTATION

The selective management approach will be used to guide the use of personnel and funding for the rangeland management program. Selective management classifies allotments into three categories: "M" (Maintain in the current satisfactory condition), "I" (Improve the current unsatisfactory condition, or "C" (manage in a Custodial fashion).

Allotments were grouped into these categories based on their management needs, potential for improvement, and other issues analyzed and described during the planning process. The criteria for grouping of allotments are shown in the Draft Shoshone-Eureka RMP Amendment/EIS, Appendix A.

"I" Category allotments will receive the highest priority for development because grazing management is most needed to improve the basic resources and/or resolve serious resource use conflicts. "M" Category allotments will receive second priority, while "C" Category allotments will be third. This does not include other resource improvement projects, such as wildlife or wild horse projects which may be developed independently from the allotment rankings.

Categories of allotments can be changed should it become necessary. If an "I" allotment for example should have all of the range improvements completed, stocking rates and seasons of use are correct, condition and trend are clearly up and management objectives are being met, the allotment could be reclassified as an "M" allotment. Conversely should important resource values in an "M" or "C" allotment appear to be deteriorating and in need of improved management sooner than other allotments, it could be reclassified as an "I". Table 1 lists allotments by category, with the "I" category allotments shown in priority order.

V. SUMMARY OF OBJECTIVES, MANAGEMENT ACTIONS AND PROGRESS OF PROGRAM IMPLEMENTATION BY ALLOTMENT

Table II summarizes, by allotment, progress made towards program implementation of the land use plan (Resource Management Plan). It shows objectives, existing stocking levels, monitoring plan components, range improvements both planned and completed, and program implementation methods. The "I" allotments will be listed first, then the "M" allotments and then "C" allotments.

VI. IMPLEMENTATION OF GRAZING USE ADJUSTMENTS

Grazing use adjustments, if necessary, will be implemented either through agreements, or through decisions based upon monitoring evaluations. On allotments without sufficient monitoring data currently available and/or without an agreement for grazing stocking levels, the actual use herbivore grazing levels will be used as a starting point for monitoring purposes.

Where monitoring data exists to support grazing use adjustments and an agreement cannot be reached, a decision will be issued. Such decisions will be implemented over a five-year period. These adjustments in grazing use may include, but are not limited to, season-of-use, period-of-use, animal numbers, kind/class of grazing animals or a combination of these.

Specific decisions or agreements for grazing use adjustments will be identified and explained in this RPS and subsequent updates.

VII. ISSUANCE OF DECISIONS AND PROTEST AND APPEAL PROCEDURES

In the absence of a documented agreement, a decision will be issued to permittees/lessees, or agents of record, or other affected interests who have expressed their interest in writing to the District Manager. Any permittee, lessee or other affected interests may protest the proposed decision, and any person whose interest is adversely affected by the final decision may appeal to the District Manager, Bureau of Land Management, P.O. Box 1420, Battle Mountain, Nevada 89820.

24	Flynn/Parman and Jiggs <sup>2/</sup>		
25	Potts		
26	Cottonwood and Home Station <sup>1/</sup>		
27	Sweeney Wash		
28	Clear Creek <sup>1/</sup>		

<sup>1/</sup> Implementation of the Rangeland Management Program for allotments located within the Shoshone-Eureka Resource Area boundary, but administered by other BLM resource areas or districts, will be based on the administering district's established priorities. Since issuance of the initial allotment categorization, the Clear Creek Allotment has been transferred to the Tonopah Resource Area, Battle Mountain District for administration, and a small portion of the Cottonwood Allotment, now known as the Home Station Allotment, has been transferred to the administration of the Carson City District.

<sup>2/</sup> Allotments administered for other districts in conjunction with adjoining allotments in the Shoshone-Eureka Resource Area.

## VIII. RESOURCE MONITORING AND EVALUATION

A monitoring program will be established on all allotments. The intensity of the monitoring process will depend upon the allotment category and the resource management objectives of the allotment. Information obtained from the monitoring studies will be used to evaluate the effectiveness of management in meeting the multiple use objectives for the allotment, and, if monitoring data indicates, will provide the basis for adjustments in grazing use.

The monitoring program will consist of short and long term studies with the intensity of studies depending on the degree of resource conflicts and multiple use objectives for each allotment. Short term studies include utilization, actual use, and wild horse census, use pattern mapping and climate. Long term studies include Ecological Status, Apparent Trend and Frequency Trend, stream surveys, big game habitat ratings, and photographs. This data will be collected intensively on all "I" category allotments, and some, or all, of this data will be collected on "M" category allotments depending upon the multiple use objectives. Monitoring on "C" category allotments may be minimal and read periodically to ensure that present management is accomplishing the objectives of the Resource Management Plan.

Monitoring Plans will be prepared for all "I" and "M" category allotments during the first year following issuance of the RPS. Implementation of the monitoring plans for "I" and "M" category allotments will be initiated in the second year following the RPS, or sooner. By the end of the fifth year following the RPS, a decision will be issued or an agreement entered into for those allotments where monitoring studies indicate a change is in order to meet management objectives.

The following are the major rangeland elements to be monitored:

### A. Plants

Condition - Ecological range condition may be determined for each key management area for condition classification. Condition transects at key study sites will be re-evaluated upon measurement of a significant change in trend data to determine progress towards accomplishment of management objectives. In addition, allotments may be inventoried on an allotment-wide basis to determine ecological status. The priorities for collecting this inventory data generally follow the priorities listed on Table I.

Trend - Studies will be conducted periodically on selected upland and significant riparian areas to determine changes in key plant species and frequency to determine progress in meeting vegetation objectives.

Utilization - Forage and browse utilization studies will be conducted to determine the pattern of grazing use and amount of vegetation removed by grazing animals.

B. Animals

Livestock - Actual use data will be obtained from the permittee annually. Licensed use may also be used when appropriate. These records will reflect the number and class of animals grazing each pasture and the dates livestock graze there. Additional livestock counts will be made periodically on an as-needed basis.

Wildlife - Use data will be provided annually by the Nevada Department of Wildlife on animal populations and seasonal use patterns, in cooperation with the Battle Mountain District Office.

Wild Horses and Burros - Wild horses and burros will be censused every 2-5 years. Additional monitoring will be initiated to collect information relative to areas of use, seasonal movement patterns, sex ratios, and other facets of populations dynamics, so that it can be determined if habitat and population management objectives are being met.

C. Weather

Weather data will be analyzed to estimate the effects of crop-year precipitation on herbage yields and for correlation with forage utilization studies.

IX. RANGELAND PROGRAM SUMMARY UPDATES

Rangeland Program Summary updates will be issued as significant changes in the implementation of the Rangeland Program occur.

The rangeland program summary update will:

- A. Update the resource conditions and management actions that have been taken and identify progress made toward meeting the allotment specific objectives.
- B. Summarize the agreements negotiated to date.
- C. Summarize the decisions and agreements remaining to be issued.
- D. Explain other progress made to date.
  - CRM Status
  - Range Improvements
  - Grazing Systems Implemented
  - Monitoring

E. Discuss significant changes from the grazing program described in this RPS and give the reasons for those changes.

F. Discuss the range program outlook.

X. APPROPRIATIONS

The development of grazing management for the Shoshone-Eureka Resource Area will depend on adequate appropriations and manpower for implementation.

Allotment/ Selective Mgmt Category/Operators	Vegetation Ecological Condition & Trend Objectives	Progress	Livestock Existing Use/Mgmt. Objectives	Progress	Wildlife Mgmt. Objectives	Progress
*S. Buffalo/ "I"/ Joe Saval Co.	Utilization not to exceed 50% on key species by seed dissemination, and 60% by the end of the grazing year.  **Improve range/ecological condition from poor to fair on 1,054 acres, and from fair to good on 24,617 acres and from good to excellent on 497 acres.		Existing Use 9,035 AUMs cattle.  Manage, maintain and improve public rangeland conditions to provide forage on a sustained yield basis with an initial stocking level of 9,035 AUMs.	90 livestock AUMs suspended due to fire (1985).  A final decision has been issued approving a partial conversion from cattle to sheep on the eastern portion of the allotment. The Joe Saval Co. has appealed the decision.  A final decision has been issued on an application to graze 175 domestic sheep on the west side of the allotment on the Tobin Mtns. The decision approved the sheep use but directed the use to occur in an area other than the Tobin Mtns. until an assessment was completed on the potential for conflict with plans to reintroduce bighorn sheep. The operators have appealed the decision. An assessment has been completed on the potential for conflict with bighorn sheep and a decision will be issued denying any domestic sheep use on the western portion of the allotment including the Stillwater and Tobin Ranges.	Existing Use: 626 AUMs deer.  Manage, maintain or improve public rangeland habitat condition to provide forage on a sustained yield basis with an initial forage demand for big game of 381 AUMs for mule deer and 135 AUMs for bighorn sheep by:  a. Improving and maintaining the mule deer habitat condition in Stillwater Range DY-3 and Tobin Range DY-4 and DS-4 to at least good condition.  b. Improving bighorn sheep habitat in Tobin Range BY-2 to 90% of optimum. Protect sage grouse strutting and nesting habitats, and improve brooding habitat.  Wildlife habitat management objectives for vegetation utilization shall be as follows except where adjusted by an approved HMP, AMP and HMAP.  1. Terrestrial: Will not exceed levels established in the Sonoma-Gerlach EIS Table I-4 for key species.  2. Wetland: Shall not exceed 50% for key species.	
*The Shoshone-Eureka Resource Area, Battle Mountain District administers the livestock grazing management and wildlife habitat management in the S. Buffalo Allotment, with one exception. The Sonoma-Gerlach Resource Area, Winnemucca District administers the wildlife habitat management on the Tobin Mountain Range and Buffalo Mtns. The S. Buffalo Allotment has been placed in the Intensive (I) Selective Management Category to match the category for the adjoining Buffalo Valley Allotment.						
*The ecological conditions in this allotment are forage condition that will be replaced with ecological status condition as information becomes available. The objective will be redefined/quantified to obtain a particular ecological status when site potential and identified uses are combined to meet vegetative objectives.

\*The Shoshone-Eureka Resource Area, Battle Mountain District administers the livestock grazing management and wildlife habitat management in the Battle Mountain Corner Allotment for the Elko Resource Area, Elko District. There are no adjudicated livestock grazing privileges in the Battle Mountain Corner Allotment at this time. The Shoshone-Eureka Resource Area has placed the Battle Mountain Corner in the Intensive (I) selective management category to match the categories assigned to the adjoining but unfenced Copper Canyon and N. Buffalo Allotments.

						Bene:Cost	Planned	Completed
						Range: Actual Use Utilization		

- 1/ Utilization limits refer to use by all herbivores. The utilization limits alone may only maintain existing conditions, but when coupled with other management practices, such as deferment and rest rotation grazing, are expected to allow for improvement of conditions.
- The utilization objectives described under the heading 'Vegetation Ecological Condition and Trend Objectives: are the maximum allowed, unless lower utilization levels are specified under other allotment objectives.
- Regarding those allotments with objectives for winterfat, utilization is not to exceed 30 percent during during the growing season, in addition to the maximum limits allowed through the end of winter dormancy.
- 2/ For those acres not identified for improvement, ecological conditions, wildlife habitat and wild horse and burro habitat will be managed to prevent downward trends.
- 3/ Livestock use may be licensed up to active preference, however, it is not anticipated that use will exceed the 5 year average AUMs which is displayed as existing use. Stocking levels are subject to adjustment through the cooperation, coordination and consultation process and monitoring results.
- 4/ Wild horse and burro numbers by allotment are mathematical calculations based on the percent of the herd area that occurs within each allotment. This includes the assumption that numbers of animals are uniformly distributed throughout the herd management area. Actual distribution may differ. These numbers represent only those herd management areas within the confines of the Shoshone-Eureka Resource Area or allotments administered by the Shoshone-Eureka Resource Area.
- 5/ AMP (Allotment Management Plan for Livestock)
- 6/ HMP (Habitat Management Plan for Wildlife)
- 7/ HMAP (Herd Management Area Plan for Wild Horses and Burros)

Maintain or improve wild horse habitat in a condition which enhances or preserves their wild and free-roaming behavior, in conformance with other objectives of the RMP. (For example, the absence of fences which disrupt normal distribution and movement patterns.)		Wild Horses & Burros: Aerial Census Young/Adult Class. Actual Use	Every 2-5 yrs.					
Maintain or improve wild horse habitat by ensuring free access to water, in conformance with other objectives of the RMP.

Range: Actual Use Utilization								

- 1/ Utilization limits refer to use by all herbivores. The utilization limits alone may only maintain existing conditions, but when coupled with other management practices, such as deferment and rest rotation grazing, are expected to allow for improvement of conditions.  
The utilization objectives described under the heading "Vegetation Ecological Condition and Trend Objectives: are the maximum allowed, unless lower utilization levels are specified under other allotment objectives.  
Regarding those allotments with objectives for winterfat, utilization is not to exceed 30 percent during during the growing season, in addition to the maximum limits allowed through the end of winter dormancy.
- 2/ For those acres not identified for improvement, ecological conditions, wildlife habitat and wild horse and burro habitat will be managed to prevent downward trends.
- 3/ Livestock use may be licensed up to active preference, however, it is not anticipated that use will exceed the 5 year average AUMs which is displayed as existing use. Stocking levels are subject to adjustment through the cooperation, coordination and consultation process and monitoring results.
- 4/ Wild horse and burro numbers by allotment are mathematical calculations based on the percent of the herd area that occurs within each allotment. This includes the assumption that numbers of animals are uniformly distributed throughout the herd management area. Actual distribution may differ. These numbers represent only those herd management areas within the confines of the Shoshone-Eureka Resource Area or allotments administered by the Shoshone-Eureka Resource Area.
